

Awareness Saves Lives! Know Lyme Disease.

Are you aware of a disease that is spreading across the United States at a rate 7 times faster than that of AIDS? It is estimated that at least 300,000 new cases will be contracted this year alone. Prevention and early detection are key, yet only 10% of us will be properly diagnosed and treated. Many will suffer and some will die. Will you or someone you love be one of them? Lyme disease. We're all at risk. Just half of those infected remember having a tick bite or a bullseye rash. Please take the time to learn about Lyme! Because, what you don't know can kill you. Visit www.knowlyme.com for more information. It just might save a life.

Infected nymph deer ticks are the size of a poppyseed.

90% of those infected slip through the cracks due to inaccurate and inadequate testing. So, left untreated with the antibiotics needed to cure their infections, they will develop neuro-immune symptoms that mimic other diseases. Called "The Great Imitator", chronic Lyme Disease often gets misdiagnosed as another disease. Here is a partial list of misdiagnoses:

- Rheumatoid Arthritis (RA)
- Lupus
- Fibromyalgia
- Chronic Fatigue Syndrome (CFS)
- Autism
- Lou Gehrig's Disease (ALS)
- Parkinson's Disease
- Alzheimer's Disease
- Psychiatric illnesses (of all kinds)
- Multiple Sclerosis (MS)
